Pulpdent Offers Patient Brochure on Sealants

WATERTOWN, MA: March 8, 2008— Pulpdent Corporation, manufacturer of Embrace WetBond Pit and Fissure Sealant, is offering an informative patient brochure that promotes patient education, oral health, and also serves as a practice builder.

The new Pulpdent patient brochure explains how sealants are applied and why they work. Frequently asked questions such as “When should teeth be sealed?” and “How long will the sealants last?” are answered. Clear illustrations show how the fast, easy, painless procedure is performed.

The brochure includes a brief summary of a clinical study to demonstrate the success of Embrace sealant use. The study showed that after a minimum of two years, none of the 1102 teeth sealed with the Embrace WetBond Pit and Fissure Sealant had developed caries on the sealed occlusal surfaces. Embrace is the first sealant resin that can be applied to the moist tooth. It integrates with tooth structure, forming a margin-free interface that virtually eliminates microleakage.

The Pulpdent Sealant Brochure is available upon request. Simply call Pulpdent at (800) 343-4342 or request via email at pulpdent@pulpdent.com, subject: sealant brochure.
