Dental Innovation Since 1947

WHO WE ARE

Pulpdent is a family owned and operated dental research and manufacturing company established in 1947. Pulpdent is committed to its founding principles of education, prevention and proactive dental care so that people can live healthier and more productive lives.

Pulpdent's research and product development is directed toward unlocking nature's healing powers with bioactive materials that mimic the physical and chemical properties of tooth structure, behave favorably in the moist oral environment, and maximize the potential for remineralization.

FOUNDING PRINCIPLES

Pulpdent's founder, Dr. Harold Berk, practiced dentistry for almost 65 years and taught on the faculty of Tufts University School of Dental Medicine from 1946 to 2005. Dr. Berk's core principles continue to guide the company:

"I start with the least invasive treatment plan, and if it should fail, there is always the option to take the next step."

"I have learned that nature has tremendous healing powers, and one of my responsibilities is to create an environment that is favorable for the natural healing process."
